

PLASTIC KILLER

LIFE12 ENV/IT/000374

Co-funded by
the European Community

Final Conference

The project is almost at its end. All the “preparatory actions”, the “implementation actions”, and the “monitoring of the impact of the project actions” have been closed, and the project objectives have been achieved.

The dissemination and networking activities will continue until the end of the project, and even later.

The pilot plant is still at the premises of the company which collaborated with PAL during the industrial demonstration phase, in order to produce a higher quantity of MDF panels and improve the performances of the plant, which is working at its full capacity.

PAL has been contacted by the Italian Ministry of Environment for a study trip that the Slovenian LIFE Team (with reference to the project LIFE14 CAP/SI/000012 Capacity Building) made at the beginning of April. PAL host the Slovenian LIFE Team on 04/04/2017, presented the Plastic Killer project, and exchanged many information.

PAL, in collaboration with UNIPD, organized the project's Final Conference that has been held at University of Padova on 05/04/2017. All the speeches were closely related to the theme of recycling and of the environmental protection. At the end of the Conference, the speakers and the participants debated together and exchanged many information about the different topics discussed.

In the last months, the Plastic Killer project has been also disseminated during some international fairs, such as Woodex Fair (Teheran, Iran) from 15/02/2017 to 18/02/2017, Woodexpo Fair (Teheran, Iran) from 06/02/2017 to 09/02/2017, and Delhiwood Fair (New Dehli, India) from 01/03/2017 to 04/03/2017.
